

NIKITA SHAM GURAV

AI Data Science Analyst | Data Analytics · Machine Learning · AI Agents (LLM / RAG)

Navi Mumbai, India | nikitagurav102@gmail.com | linkedin.com/in/nikita-gurav-a7b7732b9 | github.com/Nikita3909

Portfolio: nikita3909.github.io — 2 open-source ML projects and 8 live demos (LLM agent, dashboards, CRM)

SUMMARY

AI Data Science Analyst with an **MSc in Data Science (CGPA 9.61)** and **1.5+ years** of professional experience across the full data-to-AI cycle: SQL and Python analysis, **forecasting and classification models** with proper validation, **LLM agents with RAG** and tool calling, and the dashboards and automations that put results in front of decision-makers. Built **36 data and AI tools** used daily across 6 departments and cut manual reporting effort by **80%**. Seeking AI Engineer, Data Scientist, Data Analyst or Machine Learning Engineer roles.

TECHNICAL SKILLS

ML & AI	Python, scikit-learn, statsmodels, forecasting (Holt-Winters, ML regressors), classification & churn models, model validation (rolling backtests, leakage tests, PR-AUC, WAPE), LangGraph agents, RAG & embeddings, LLM APIs, prompt engineering
Data Analysis	SQL, PostgreSQL, Pandas, NumPy, EDA, statistical analysis, RFM segmentation, data cleaning & reconciliation
BI & Reporting	Power BI (DAX, data modelling), Tableau, Looker Studio, Plotly / Streamlit, Advanced Excel, KPI dashboards
Deployment	Node.js / Express, React, TypeScript, FastAPI, REST APIs, n8n, Google Apps Script, Sheets API, SQLite, MongoDB, Git, Render

PROFESSIONAL EXPERIENCE

AI Data Science Analyst — BioPapro Pvt. Ltd. Sep 2025 – Present

- Built a **Procurement AI Agent**: a **LangGraph** tool-calling LLM agent with local **RAG** search (ONNX embeddings) and a procurement knowledge graph that answers planning, PO, payment and landed-cost questions; React / TypeScript / Node.js app with 8 Vitest test suites.
- Built Python analytics on a PostgreSQL sales database — **Holt-Winters revenue forecasting** with MAE / MAPE checks, **RFM customer segmentation** and an LLM sales assistant that answers questions in plain English via SQL.
- Built the **CEO Command Center** analytics dashboard (Node.js on Render) reading 8 Google Sheets: department health scoring, attention ranking, alerts and drill-downs for stock, receivables, orders, pipeline and margin.
- Automated recurring MIS reports with Google Apps Script and AI tools, **reducing manual reporting effort by 80%**; built Power BI and Looker Studio dashboards for productivity and operational KPIs.
- Built **n8n AI agents**: a WhatsApp lead-qualification agent (voice transcription, image analysis, CRM updates, meeting booking) and a 163-node AI marketing pipeline that plans, writes, designs and publishes content.
- Built a Tally-vs-dispatch **data reconciliation** tool (Python) and an automated Tally → Google Sheets finance pipeline with stale-data alerts; delivered a full-stack CRM (React, Node.js, 3 user roles) as the team's data-entry layer.
- Gathered requirements with Sales, Operations, Finance and HR (BRD/FRD) and performed root-cause analysis on operational issues.

Junior Data & Business Analyst (Contract) — Calyx Chemicals & Pharmaceuticals Jan 2025 – Jun 2025

- Designed MIS and BI reports and KPI dashboards for daily and weekly tracking across Sales, Marketing and Operations.
- Cleaned, validated and consolidated multi-source data to improve reporting accuracy; supported planning and forecasting with trend analysis.

Data Analyst Intern — Quantum Learnings

Aug 2024 – Dec 2024

- Power BI KPI dashboards, SQL queries, data cleaning and ad-hoc analysis.

Data Analyst Intern — Y. D. Patil Software Dev. Cell, Pune

Jan 2024 – Apr 2024

- Power BI, Tableau and Excel dashboards; Python / Pandas EDA.

SELECTED PROJECTS

Demand Forecasting: 7 Models Compared
Python · scikit-learn · statsmodels · Pandas

- Compared naive baselines, Holt-Winters, ridge, random forest and gradient boosting on an 8-week rolling-origin backtest (4 folds); random forest reached **12.0% WAPE, 17.5% lower error** than the seasonal baseline. Leakage-safe lag features with automated tests. (synthetic data)

[github.com/Nikita3909/ml-demand-forecasting](#)

B2B Customer Churn Prediction + RFM
Python · scikit-learn · Pandas

- Time-split churn model on monthly snapshots: calling the riskiest 20% reaches **91% of churners** (rule of thumb: 80%), PR-AUC 0.91; showed that RFM's "At Risk" label alone can mislead. (synthetic data)

[github.com/Nikita3909/ml-customer-churn](#)

Live demos of production systems

- Clickable demos (fictional data) of the Procurement AI Agent, CEO Command Center, n8n AI workflows, Sales CRM, Export Lead Tracker, Tally Sync and a 3D packaging tool.

EDUCATION

MSc in Data Science — University of Pune	2025 CGPA 9.61 / 10
BSc in Mathematics — University of Mumbai	2023 CGPA 8.50 / 10

CERTIFICATIONS & ACHIEVEMENTS

- Gold Certificate** — Data Science & Analytics, FutureSkills Prime, Government of India
- Python for Data Science & Machine Learning — Udemy · Advanced Excel — Quantum Learnings
- Lila Poonawala Foundation Scholarship** — Academic Excellence Award
